Ceramic Ceramica

The ceramics used are almost totally waterproof as the water absorption is minimum. Therefore the dirt cannot penetrate but it is necessary to remove it from the surface. Clean with water and a small quantity of neutral detergent. For the cleaning do not use detergents containing waxes or waxing products, in order to avoid the formation of greasy layers. A regular cleaning of the ceramic highlights its aesthetic features.

Le ceramiche utilizzate sono praticamente impermeabili con un assorbimento d'acqua minimo, pertanto anche la sporcizia non può penetrare e deve soltanto essere asportata dalla superficie del materiale. Pulire utilizzando acqua e una piccola quantità di detergente neutro. Si sconsiglia di utilizzare detergenti contenenti cere o prodotti ceranti per evitare la formazione di strati untuosi. Una pulizia adeguata delle ceramiche ne valorizza le caratteristiche estetiche.

As you can see from the image the ceramic tops are cut from 300/320x150/160 cm sheets that reproduce natural patterns. Therefore each top has a unique aspect. Ceramic is a material with special characteristics such as the resistance to external agents, bumps and scratches.

Come mostrato nella figura sotto i piani in ceramica sono ricavati da lastre della misura di 300/320 cm x 150/160 cm che riproducono le texture naturali pertanto ogni top avrà un aspetto unico. La ceramica è un materiale con peculiarità quali la resistenza ad agenti esterni, ad urti e a graffi.
